

# OFF-GRID SOLUTIONS

High Quality. Low Impact.

Off-grid solutions require more than a cookie cutter approach. Pillar's diverse team of engineers and tradesmen has the skill and experience to design and deploy tailored systems. Where some firms are focused on a specific technology, application, or industry, our approach is to evaluate the need and supply a package that is the best fit from a value and performance standpoint. We have produced a wide range of off-grid solutions including solar powered train monitoring, an underground mining refuge chamber, and a hydraulically powered manufacturing facility. From remote sites to rugged industrial installations to green initiatives our team has you covered.

## SPECIFICATIONS

### Technology

- Solar
- Wind
- Battery Backup
- Generator
- Compressed Air

### Applications

- Communications
- SCADA
- Climate Control
- Security

### Services

- Engineering & Design
- Manufacturing
- Installation
- Service & Maintenance

Solar Towers

Wind Power

Battery-Powered Air Conditioning

GVB Trailer
